

# Ubuntu

---

# Ubuntu

**Ubuntu** is a *Linux* distribution based on *Debian* and composed mostly of free and open-source software. **Ubuntu** is officially released in multiple editions: **Desktop, Server, and Core** for Internet of things devices and robots. The operating system is developed by the British company Canonical, and a community of other developers, under a meritocratic governance model. As of October 2023, the most-recent release is 23.10 ("*Mantic Minotaur*"), and the current long-term support release is 22.04 ("*Jammy Jellyfish*").

As with other [Linux distributions](#), all of the editions can run on a computer alone, or in a [virtual machine](#). An upgrade to Ubuntu is released every six months, with long-term support (LTS) releases every two years. Canonical provides security updates and support for each [Ubuntu](#) release, starting from the release date until the release reaches its designated end-of-life (EOL) date.

**what is Debian?** Debian, also known as Debian GNU/Linux, is a Linux distribution composed of free and open-source software and proprietary software developed by the community-supported Debian Project, which was established by Ian Murdock on August 16, 1993. # Ubuntu Distributions

## Official distributions

- Desktop:
- Edubuntu
- Kubunutu
- Lubuntu
- Xubuntu
- Ubuntu Unity
- Ubuntu Budgie
- Ubuntu Mate
- Ubuntu Studio
- Ubuntu Cinnamon
- Ubuntu Kylin

## Other

1. Ubuntu Cloud Images
2. Ubuntu Core
3. Ubuntu Server
4. Ubuntu Touch

## Unofficial distributions

- Ubuntu DDE
- Ubuntu Web

# Linux Commands

## Some Basic Linux Commands

- 'date:' displays the current time and date
- 'cal:' displays a calendar of the current month
- 'df:' displays the current amount of free space on our disk drives
- 'free:' displays the amount of free memory
- 'uname:' displays information about your system
- 'clear:' clears the screen

## A Basic bash script

```
#!/bin/bash echo "The current date and time: " date echo "Basic details about the PC" uname -a echo "Total free memory" free -h
```

## Commands to navigate the filesystem

command	Description
ls	list files and directories

command	Description
pwd	prints current directory
cd	change current directory
